

ANUSHKA ARUN POOJARI

📍 Mumbai, Maharashtra, 421103

☎ +91-8928033349 ✉ anushkapoojari2004@gmail.com

Summary

Passionate and dedicated IT Engineering graduate with hands-on experience in developing scalable and user-centric applications. Possessing a strong foundation in programming, problem-solving, and system design, with the ability to work across both frontend and backend development environments. Experienced in building real-world projects in web development, artificial intelligence, and cloud computing. A quick learner and effective team player who is passionate about leveraging technology to solve real-world challenges while continuously adapting to emerging technologies and industry trends.

Skills

C++ HTML CSS SQL MongoDB Java Python React.js Node.js Javascript

Education

Don Bosco Institute of Technology Mumbai

B.E. - Information Technology, CGPA: 7.05 / 10

2026

Matoshree Velbai Devaji Hambarde College

12th, CGPA: 70 / 100

2022

Shree M. D. Dedhia English High School

10th, CGPA: 90 / 100

2020

Experience

TheLonelyBag

Quality Engineering Intern

Aug 2025 - Nov 2025

- Completed a Quality Engineering Internship at The LonelyBag, focusing on software testing and quality assurance.
- Designed and executed test cases to validate application functionality and identify defects.
- Worked with Appium for mobile application test automation and implemented locator strategies for efficient testing.
- Reported, tracked, and verified software bugs, collaborating with developers to ensure timely resolution.
- Performed functional and regression testing to improve product quality, reliability, and user experience.

Don Bosco Institute of Technology

Web Developer Intern

Jul 2024 - Jul 2025

- Completed a Web Developer Internship for the Department Website.
- Developed and maintained responsive web pages to enhance accessibility and user experience.
- Updated and managed website content, ensuring accuracy and timely information delivery.
- Implemented responsive design principles for optimal performance across multiple devices.

- Collaborated with faculty members to improve website functionality, usability, and performance.

Projects

1. Real Time AI Voice Agent Interview Platform

- Developed a real-time AI-powered interview platform using Next.js and Tailwind CSS, providing an interactive and responsive user experience.
- Integrated Vapi AI to enable real-time voice-based communication between users and the AI interviewer.
- Utilized Google Gemini to generate dynamic interview questions and provide personalized AI-driven feedback.
- Implemented Firebase Authentication for secure user login and Firestore Database for storing interview transcripts, session data, and user records.
- Designed and developed a personalized dashboard allowing users to access interview history, feedback, and performance insights.
- Applied Zod for schema validation to ensure reliable form handling and API data validation. Managed real-time audio input and output streaming through browser microphone integration using Vapi SDK.

2. Multiple Disease Prediction

Integrated multiple prediction models into a single platform and deployed them using Pickle for efficient model loading.

- Developed a machine learning-based system to predict Diabetes, Heart Disease, and Parkinson's Disease.
- Preprocessed healthcare datasets using Pandas and NumPy and trained predictive models using Scikit-learn.
- Implemented machine learning algorithms including Logistic Regression and Support Vector Machine (SVM).
- Built an interactive Streamlit-based web application for real-time disease prediction and user input.
- Integrated multiple prediction models into a single platform and deployed them using Pickle for efficient model loading.

3. Maid Hiring System

- Developed a React-based maid hiring platform with features like user/maid authentication, dynamic booking, and admin dashboard controls.
- Built a scalable backend using Node.js and Express.js, ensuring fast response times and smooth API handling.
- Integrated MongoDB for managing user, maid, and booking data, with optimized queries for performance and reliability.
- Implemented secure password handling using bcrypt and enabled image uploads for maid profiles via Multer.
- Designed an intuitive UI with advanced search and filter options based on location, service type, and availability.
- Integrated multiple prediction models into a single platform and deployed them using Pickle for efficient model loading.

4. Smart GIS-Based Vulnerability Mapping and Evacuation Route Planner for Urban Flood Response in Mumbai

- Developed a Smart GIS-based flood vulnerability mapping and evacuation route planning system for Mumbai.
- Built a hybrid routing engine using OSRM and PostGIS to generate multiple evacuation routes with flood-risk scoring.
- Performed spatial analysis by overlaying route geometries with flood-prone zones to identify safer paths.
- Designed an interactive Web GIS interface using React and Leaflet with real-time map visualization and location-based services.
- Implemented REST APIs, authentication (JWT), and a chatbot for emergency guidance and nearest shelter/hospital detection.

Certifications

• Microsoft Certified: Azure Fundamentals (AZ-900)

Key Skills: Cloud Computing, Microsoft Azure, Azure Services, Cloud Concepts

Successfully completed the Microsoft Certified: Azure Fundamentals (AZ-900) certification, which validates foundational knowledge of cloud services and how Microsoft Azure provides these services. The certification covers key areas such as cloud concepts, Azure architecture, core Azure services, governance, compliance, security, pricing, and support.

Awards

- Designed and developed Flappy Rocket, a Unity-based mobile game and published on the Google Play Store.

Accomplishments

- Participated in a Hackathon at Terna College, sharpening problem-solving and technical skills
